

Free Public Lecture

Thursday, November 13, 2014, 7:30 – 8:30 PM
San Diego State University
North Education Building, Rm. 060

Dr. Jeffrey Bennett, astronomer and author

We are rapidly approaching the 100th anniversary of the publication of Einstein's General Theory of Relativity (published in 1915), yet the vast majority of students, teachers, and the public know very little about the critical importance of either the special or general theories to modern understanding of the universe. In this presentation, based on his book from Columbia University Press, Dr. Bennett will introduce you to the basic ideas of Einstein's theories and discuss why they are important to everyone. No prior knowledge of physics or relativity will be assumed, and all are welcome!
